FUNCTION: MAY PLAY A ROLE IN THE PROCESSES OF LYMPHOCYTE HOMING SECONDARY LYMPHOLD ORGANS.
                            SUBCELLULAR LOCATION: Type I membrane protein (Potential). TISSUE SPECIFICITY: PROMINENTLY EXPRESSED ON HIGH ENDOTHELIAL VENULES BUT IS ALSO PRESENT ON THE ENDOTHELIA OF OTHER VESSELS. LOCALIZED TO THE INTERCELLULAR BOUNDARIES OF HIGH ENDOTHELIAL
                                                                                                            SIMILARITY: Belongs to the immunoglobulin superfamily.
SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
SIMILARITY: Contains 1 immunoglobulin-like C2-type domain.

Generch S.J.M., Parra M.A., Schein J.E., Jones S.J.M., Marra M.A., Formation. Appears early in primordial forms of cell junctions association of the Paplo-Paplo preventing regulating monoyve tensingarity). Plays a role in regulating monoyve tensingarity of epithelial barrier. Involved in platelet-activation.

C. Guidlaring monoyve transmigration involved in integrity of epithelial barrier. Involved in platelet-activation.

C. Subduni: Interacts with the first PDZ domain of PARDS in Companion of Epithelial and endederming the Markes probably disrupts this interaction (By similarity).

C. Subduni: Interacts with the first PDZ domain of PARDS in Companion of the Paplo Markes Decardon. Type I membrane protein (Potential).

C. Subduni: Interacts with the first PDZ domain of PARDS PARDS Companion of the Paplo Markes Intellipted at tight junctions as the content is in no way to between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SMART; SM00406, IGv. 1.

RI "Combined treatment of TNF-alpha and IFN-gamma causes redistribution

RI [unctional adhesion molecule in human endothelial cells.";

L. - FUNCTION: Seems to plays a role in epithelial tight junction

RI Granation. Appears early in primordial forms of cell junctions and

recruits PARD3. The association of the PARD6-PARD3 complex may

prevent the interaction of PARD3 with JAM1, thereby preventing

regulating monocyte transmigration involved in integrity of

collight junction assembly (By similarity). Plays a role in

regulating monocyte transmigration involved in integrity of

epithelial barrier: Involved in platelet activation.

C. SUBGELULAR LOCATION: Type I membrane procein (Potential).

C. I TISSUE SPECIFICITY: Localized at tight junctions of both

epithelial and endothelial cells.

C. SIMILARITY: Belongs to the immunoglobulin-like V-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. Biochem. Biophys. Res. Commun. 236:682-686(1997).

-!- FUNCTION: May play a role in cell-cell recognition and signaling.

-!- SUBCELLULAR LOCATION: Type I membrane protein.

-!- TISSUE SPECIFFICITY: Expressed in normal gastrointestinal epithelium and in 95% of colon cancers.

-!- PTM: N-GLYCOSYLATED, CONTAINS APPROXIMATELY 8 KDA OF N-LINKED CARBOHYDRATE.

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: SERVES AS.A RECEPTOR FOR GROUP B COXSACKIEVIRUSES AND SUBGROUP C OF ADENOVIRUSES (AD2 AND ADS).

-!- SUBGELLULAR LOCATION: Type I membrane protein.

-!- SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Andersson B., Tomko R., Andersson K., Darban H., Oncu D., Mizra M., Sollerbrant K., Sonnhammer E., Philipson L., "Putative regulatory domains in the human and mouse CAR genes."; Submitted (MAR-2000) to the EMBL/GenBank/DDBJ databases.

-:- TISSUE SPECIFICITY: In embryos, both isoforms are initially expressed on the surface of the axons in the MPI pathway and later on several other Inngitudinal axon fascicles:
-:- SIMILARITY: Contains 2 fibronectin type III domains.
                                                                                                                                                                                    -!- FUNCTION: Neuronal recognition molecule for the MPI axon pathway, pathway recognition for axons during the development of nerve fascicles.

Submitted (APR-2002) to the EMBL/GenBank/DDBJ databases.

Submitted (APR-2002) to the EMBL/GenBank/DDBJ databases.

Intice assembly begins with positional cues laid down in the lattice assembly begins with positional cues laid down in the basement membrane and muscle cell membrane. UNC-89 responds to these signals, localizes, and then participates in assembling an M-line.

TISSUE SPECIFICITY: Localizes to the middle of A-bands.

INTILARITY: Contains I bibL-homology (DH) domain.

SIMILARITY: Contains 19 immunoglobulin-like C2-type domains.

SIMILARITY: Contains 1 RCSD domains.

SIMILARITY: Contains 1 SH3 domain.

FUNCTION: Direct ligand for ERBE3 and ERBE4 tyrosine kinase receptors. Concomitantly recruits ERBE1 and ERBE2 coreceptors, resulting in ligand-stimulated tyrosine phosphorylation and activation of the ERBE receptors. May also promote the heterodimerization with the EGF receptor. Subcellular Location with the EGF receptor. A PROTECLULAR LOCATION: EXISTS AS AN TYPE I MEMBRANE PROTEIN AND AS MEMBRANE-BOUND FORM DOES NOT SEEM TO BE ACTIVE (BY SIMILARITY). ALTERNATIVE PRODUCTS:

```
-i. DOWAIN: The cytoplasmic domain may be involved in the regulation of trafficking and proteolytic processing. Regulation of the proteolytic processing involves initial intracellular domain dimerization (By similarity).

-i. DOWAIN: ERBB receptor binding is elicited entirely by the EGF-like domain (By similarity).

-i. PTM: Proteolytic cleavage close to the plasma membrane on the external face leads to the release of the soluble growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 form (By similarity). PTM: Extensive glycosylation precedes the proteolytic cleavage (By \ensuremath{\mathsf{PTM}}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Characterization of a neuregulin-related gene, Don-1, that is highly expressed in restricted regions of the cerebellum and hippocampus."; Mol. Cell. Biol. 17:4007-4014(1928).

Mol. Cell. Biol. 17:4007-4014(1928).

I FUNCTION: Direct ligand for BRB3 and BRB4 tyrosine kinase receptors. Concomitantly recruits BRB1 and BRBB2 coreceptors, resulting in ligand-stimulated tyrosine phosphorylation and activation of the BRB receptors. May also promote the heterodimerization with the EGF receptors.

I SUBCELLULAR LOCATION: EXISTS AS AN TYPE I MEMBRANE PROTEIN AND AS A PROTEOLYTICALLY RELEASED SOLUBLE GROWTH FACTOR FORM. THE

```
sequences useful as reagents in forensic analyses, as chromosome markers, as tissue/cell/organelle-specific markers, in producing expression vectors, or in screening and diagnostic assays. The invention is used as reagents in screening and diagnostic assays for abnormal novel expression and/or biological activity, and in screening compounds that may be used in the treatment of novel-related disorders, e.g. neurological disorders. The novel gene is also used in gene therapy. The present sequence is human novel splice variant of vascular endothelial junctional adhesion molecule (VEJAM), NoJAM of the invention

```

The present sequence represents a secreted protein. The polymucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating

Claim 17; Page 73-74; 113pp; English.

New polynucleotides foetal brain, adult cDNA libraries.

encoding secreted human proteins - derived from human brain, foetal kidney, placenta or adult pineal gland

(e.g. as vaccines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activini/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity (no data is given in the specification to support these activities). The polymucleotide is also stated to be useful for gene therapy
                                                                                                                                                                                              1 YHKAYGFSAPKDQQVVTAVXYQEAILACKTPKKTVXSRLEWKKLGRSVSFVYYQQTLQGD 60

The sequence represents a human junctional adhesion molecule 2 (JAM2). The polynucleotide encoding the polypeptide is useful for recombinant production of JAM-2 protein, which in turn is useful for the production of antibodies. The antibodies may be used for probing cellular localisation and/or expression of JAM2 in tissues under normal and disease states, for immunoprecipitating JAM2 protein from cells and/or stroke tissues to determine whether it is modified by glycosylation and phosphorylation, and for determining JAM2 function. The antibodies inhibit interaction of JAM2 with inflammatory cells or influences their paracellular migration, and is therefore useful for alleviating inflammatory diseases such as arthritis, asthma, rheumatoid arthritis, inflammatory bowel disease and Crohn's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein;

The invention relates to human secreted or transmembrane protein (1), their fragments and is encoded by specific complementary deoxyribonucleic acid (DDNA) inserts (11), where the protein is substantially free from other mammalian proteins. (1) are useful for preventing, treating or ameliorating a medical condition, especially immunological treatment or prevention of tumours. (1) exhibits activity relating to angiogenesis, or cytokine, cell proliferation, cell differential differentiation, antihilarmatory, stem call growth factor activity and activity relating to angiogenesis, or cells from the used to manipulate stem cells in culture to give cells damaged by illness, autoimmune disease, accidental damage or cells and peripheral nervous system disease, and contropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic corlinary, regulation of haematopolesis and is useful for the treating myeloid or livering corlinary and pone, cartilage, tendon, ligament and/or nerver listue growth and in tissue repair, healing of burns, incisation disorders or periodontal disease. (1) is also useful for gut protection or periodontal disease. (1) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders encombined immunodeficiency (SCID), bacterial or fungal infections, succeeding menting operatory sproblems. (1) is also useful for gut protection or or observes recombinent protein, as markers for tissues in which the ecomponing protection, as markers for tissues in which the responding protein is preferentially expressed and in gene therapy. The present cemplance is that of a polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò

The invention comprises the DNA and protein sequences of the extracellular region of human junctional adhesion molecules (huJAM). The extracellular huJAM DNA and protein sequences are useful in the treatment of: immune system disorders (e.g. immune deficiency); autoimmune disorders, cancer; wound healing; or a cardiovascular disease. The present amino acid sequence represents the full-length membrane-bound huJAMZ protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; sheep; pig; cow; fruit fly; yeast; hamster; macaque; horse; tomato; monkey; dog; sea urchin; expressed sequence tag; EST; diagnostics; forensic test; gene mapping; genetic disorder; biodiversity; gene therapy; nutrition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New extracellular human junctional adhesion molecule (huJAM) polypeptide, useful for treating an immune system disorder such as an immune deficiency or an inflammatory disorder, cancer, wound healing, or a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              \stackrel{>}{o}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           comprises the sequence of any of the genes that are up-regulated or down-
regulated in specific cancers (e.g. about 1031 genes up-regulated or
acute lymphocytic lettwemia). Acc72641 to Acc72660 represent cancer
related gene nucleotide sequences which encode the proteins given in
ABR58521 to ABR58709. Also described: (1) determining the presence or
absence of a pathological cell in a patient; (2) an expression vector
comprising a nucleic acid molecule described above; (3) a host cell
comprising the vector; (4) an isolated polypeptide, which is encoded by
the nucleic acid; (5) an antibody that specifically binds the polypeptide
of (4); (6) specifically targeting a compound to a pathological cell in a
patient by administering to the patient the antibody above; and (7) a
drug screening assay. The nucleic acid is useful for a diagnostic markers or
therapeutic targets. In particular, the nucleic acid is useful for bances, prostate, skin and uterus), wounds, ischaemia, heart diseases,
atherosclerosis and endometriosis. The nucleic acid is also useful in
a pathologica screening, particularly for identifying agents for treating these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

C Such inflammatory diseases include of inflammatory bowel disease,
Systemic lupus erythematosis, rheumatoid arthritis, jovenile chronic
arthritis, spondylearthropathies, systemic sclearosis, sclearoderma,
idiopathic inflammatory myopathies, systemic sclearosis, sclearoderma,
idiopathic inflammatory myopathies, systemic sclearosis, sclearoderma,
systemic vaculitis, sarcoidosis, autoimmune hemolytic
anemia, immune pancytopenia, paroxysmal noctural hemoglobinuta,
aucoimmune thrombocytopenia, idiopathic thrombocytopenic purpura, immune-
cutoimmune thrombocytopenia, thyroiditis, drampolic thyroiditis,
thyroiditis, juvenile lymphocytic thyroiditis, arrophic thyroiditis,
chabetes mellitus, immune-mediated remail disease, glomerulonephritis,
chublointersitial nephritis, demyelinating diseases of the central and
peripheral nervous systems such as multiple sclerosis, idiopathic
polyneuropathy, hepatobiliary diseases, infectious hepatitis, primary
cutoins fibrotic lung diseases, infectious hepatitis, primary
colliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,
inflammatory and fibrotic lung diseases, gluen-sensitive enteropathy,
diseases of the lung such as ecsinophilic pneumonies, idiopathic
cutoimmune y fibrosis and hypersensitivity pneumonitis transplantation
colliary cirrhosis and hypersensitivity pneumonitis transplantation
colliary care diseases disease. The present sequence represents PRO245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inflammatory cell infiltration, immune response, T cell proliferation, anti-inflammatory; anti-autoimmune, anti-diabetic; spondyloarthropathy, T cell-endaiated disease; spondyloarthropathy; real-disease; inflammatory myopathy; hemolytic anemia; thrombocytopenia; thyroiditis; diabetes mellitus, demyelinating polymeuropathy; Guillain-Barre syndrome; multiple sclerosis; polymeuropathy; hepatitis; cirrhosis; enteropathy; sclerosing cholangitis; inflammatory bowel disease; Mihipple's disease; skin disease; dermatitis; psoriasis; asthma; allergic rhinitis; tumor; food hypersensitivity; urticaria; eosinophilic pneumonia; transplant; idiopathic pulmonary fibrosis; graft rejection; PRO245; human.
                                                                                                                                                                                                                                                                                                                                                The specification describes A33 related antigens PRO301, PRO362 and PRO245. The methods and compositions of the invention are useful for the treatment and diagnosis of inflammatory disease and tumours in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 YHKAYGFSAPKDQQVVTAVXYQEAILACKTPKKTVXSRLEWKKLGRSVSFVYYQQTLQGD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention

This invention describes a novel composition containing (apart from a carrier or excipient), a novel PRO245 polypeptide (I) its agonist or antagonist, or their fragments, for medulating: (i) infiltration of inflammatory cells into tissue; (ii) an immune response, or (iii) T cell inflammatory cells into tissue; (ii) an immune response, or (iii) T cell products of the tinvention have anti-inflammatory anti-composition increases or decreases any of the effects (i)-(iii). The products of the tinvention have anti-inflammatory anti-composition increases or decreases any of the effects (i)-(iii). The products of the tinvention have anti-inflammatory anti-composition increases. The diseases. cell inflammatory myopathies (dermacomyositis, polymyositis), Sjogrem's systemic scleeneds artering arterianneh hemolytic anemia (inflammatory myopathies (dermacomyositis, polymyositis), Sjogrem's systemic vasculitis, sarcoidosis, autoimmune hemolytic anemia (inflammatory paroxyamal nocturnal hemoglobinuria) autoimmune cellitus, immune-mediated renal disease (glomerulonephritis, curpoiditis, demylogistis, thyroiditis, inflammatory demylinating polymeuropathy, dullain-Barre syndrome, chronic chupulointerstitial nephritis), multiple sclerosis, idiopathic cellerosing polymeuropathy, inflammatory demylinating polymeuropathy, inflammatory demylinating polymeuropathy, inflammatory demylinating polymeuropathy, inflammatory demylinating polymeuropathy, inflammatory demylinating polymeuropathy, inflammatory demylinating polymeuropathy, dulter-sensitive skin disease. Autoimmune or immune-mediated skin disease. Autoimmune or immune-mediated skin diseases. Autoimmune or immune-mediated skin diseases. Autoimmune or immune-mediated skin diseases. Autoimmune or immune-mediated skin diseases. Autoimmune or immune-mediated skin diseases. Autoimmune or immune-mediated skin diseases. Autoimmune or immune-mediated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             15-SEP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            05-0CT-1
      AAY13344-403 represent secreted and transmembrane human proteins. The CDNA sequences are obtained from CDNA libraries, prepared from fetal cund, fetal brain, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocollis, collinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte offerentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease, Alzheimer's disease, AlS, neuropathies or cancer. PRO265 can be used as a target for anti-tumor drugs. PRO593 may be used as an anti-thrombotic agent; PRO279 polypeptides and portions may chave therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, collod vessels, or related tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        23 YHKAYGFSAPKDQQVVTAVEXQEAILACKTPSSRLEWKKGGRSVSFVYYQQTLQGD 82

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO anti-Dodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are useful for treating and diagnosing immune related disorders. The disorders are osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, spondyloarthropathies, systemic vasculitis, arthritis, systemic vasculitis, arthritis, syndyloarthropathies, Sjogran's syndemic vasculitis, arcoidosis, autoimmune haemolytic mannemia autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune mediated renal disease, demyelinating diseases of the central and peripheral neavous systems, hepatobiliary diseases, inflammantory bowel disease, alloand disease, alloand whipple's disease, autoimmune cor immune mediated skin diseases, allergic disease, immunological diseases of the lung, and transplantation associated diseases including graft rejection and graft-versus-host-disease, Aucosofs) to AACS8578 represent PCR primers and hybridisation probes used in the isolation of them present invention sequences given in the expression of the present invention

The present sequence is the human protein PRO245, encoded by UNQ219 cDNA, designated as clone DNA3658. It is isolated from human focal liver tissue. It has structural homology to transmembrane protein receptor tissue. It has structural homology to transmembrane protein receptor protein. It enhances or suppresses the infiltration of inflammatory cells into tissues, proliferation of T-lymphocytes and modulates the immune response. This sequence is useful for treatment of immune related disorders, like SLE, rheumatory defined a spondyloarthropathy, systemic sclerosis (scleroderma), idiopathic inflammatory myopathies such as dermatomyositis, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune hemenlytic anaemia, thrombocytopenia, thyroiditis e.g. Grave's disoase mellitus, immune—mediated renal disease e.g. Grave's cultinan-Barre syndrome, hepstophiliary diseases such as multiple sclerosis and primary biliary cirrhosis, inflammatory and fibrotic lung diseases such as inflammatory bowel disease (e.g. Crohn's disease), autoimmune or immune-mediated skin diseases such as psoriaasis, allergies like asthma, immunelogical diseases such as psoriaasis, allergies like asthma, immunelogical diseases such as sporiaasis, allergies like asthma, immunological diseases of the lungs such as eosinophilic pneumonia and temporation associated diseases such as graft-versus-host-disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Composition for treatment and diagnosis of immune related diseases e.g. Grave's disease comprises a PRO245, PRO217, PRO301, PRO266, PRO335, PRO331 or PRO326 polypeptide or its agonists or antagonists (preferably

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful for preventing, diagnosing and treating diagnosing a cardiovascular, endotherlial or angiogenic disorder in manuals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The mucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in emmanls (e.g. atherosolenosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCS) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorders in mammals.
                                                                                                                                                                                                                                                                                                                                       Human; PRO; promotion; inhibition; angiogenesis; cardiovascularisation; diagnosis; trauma; wound; cancer; atherosclerosis; cardiac hypertrophy; angiogenic; proliferative; cardiant; cardiovascular; antiatherosclerotic; cytostatic; gene therapy; vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes nucleic acids encoding PRO polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel nucleic acid encoding a PRO polypeptide. The polypeptides and polynuclectides of the invention may be useful as research tools and as therapeutics for treating enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration, psoriasis, cancer, Parkinson's disease, Alzheimer's disease, ALS, neuropathies, dermal scarring and wound healing, nerve repair, thromboais, bone and/or cartilage formation, angiogenesis, asthma, rheumatoid arthritis, multiple sclerosis, inflammatory disorders, atherosclerosis, cardiac injury, infertility, premature aging, ALDS, diabetes complications and stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antiinflamatory; antiulcer; cytostatic; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; vasctropic; chemotaxic; angioqenic; neuroprotective; vasctropic; chemotaxic; angioqenic; antiatropic; costeopathic; antiasthmatic; antiarthritic; antimumatic; antiatrosclerotic; cardiant; antidiabetic; cerebroprotective; thrombolytic; immunomodulator; enterocolitis; Zollinger-Ellison syndrome; gastrointestinal ulceration; psoriasis; cancer; Parkinson's disease; Alzheimer's; ALS; neuropathy; dermal scarring; wound healing; asthma; thrombosis, bone; cartilage formation; angiogenesis; asthma; thrombosis, bone; cartilage formation; angiogenesis; atherosclerosis; cardiac injury; infertility; premature aging; AIDS; diabetes; stroke; gene therapy; transgenic; PRO; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acids encoding secreted and transmembrane polypeptides with homology, e.g. to growth and cancer-associated antigens.
                                                                                                                                                                                                                   9

Sixty one nucleic acids encoding PRO polypeptides which are useful in the

WPI; 2001-081051/09.

N-PSDB; AAF72383

```
The present sequence is one of sixty one novel secreted and transmembrane PRO polypeptides are useful for treating skin diseases (e.g. portaais), cancers (e.g. lung squamous carlinoma), diseases (e.g. portaais), cancers (e.g. enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), wound repair, eardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, atherosclerosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis), inflammatory infertility, AlDs and diabetes and retinal disorders such as retinitis pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      82
treatment of skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma) and neurodegenerative diseases (e.g. Alzheimer's disease).
